# Lombok Installation

Lombok is another java library which is used to generate boiler template code like getters/setters/hascode/toString and all in any java object by using annotations.

Once you add Lombok dependency in pom.xml, it should be downloaded in our local maven repository:

Repository location:

 C:\Users**\<<your user>>**\.m2\repository\org\projectlombok\lombok\1.18.34

Type CMD command in the file explorer as below:

```
C:\Windows\System32\cmd.exe   —   □   ×

Microsoft Windows [Version 10.0.19044.4651]
(c) Microsoft Corporation. All rights reserved.

C:\Users\MAXHUB\.m2\repository\org\projectlombok\lombok\1.18.34>
```
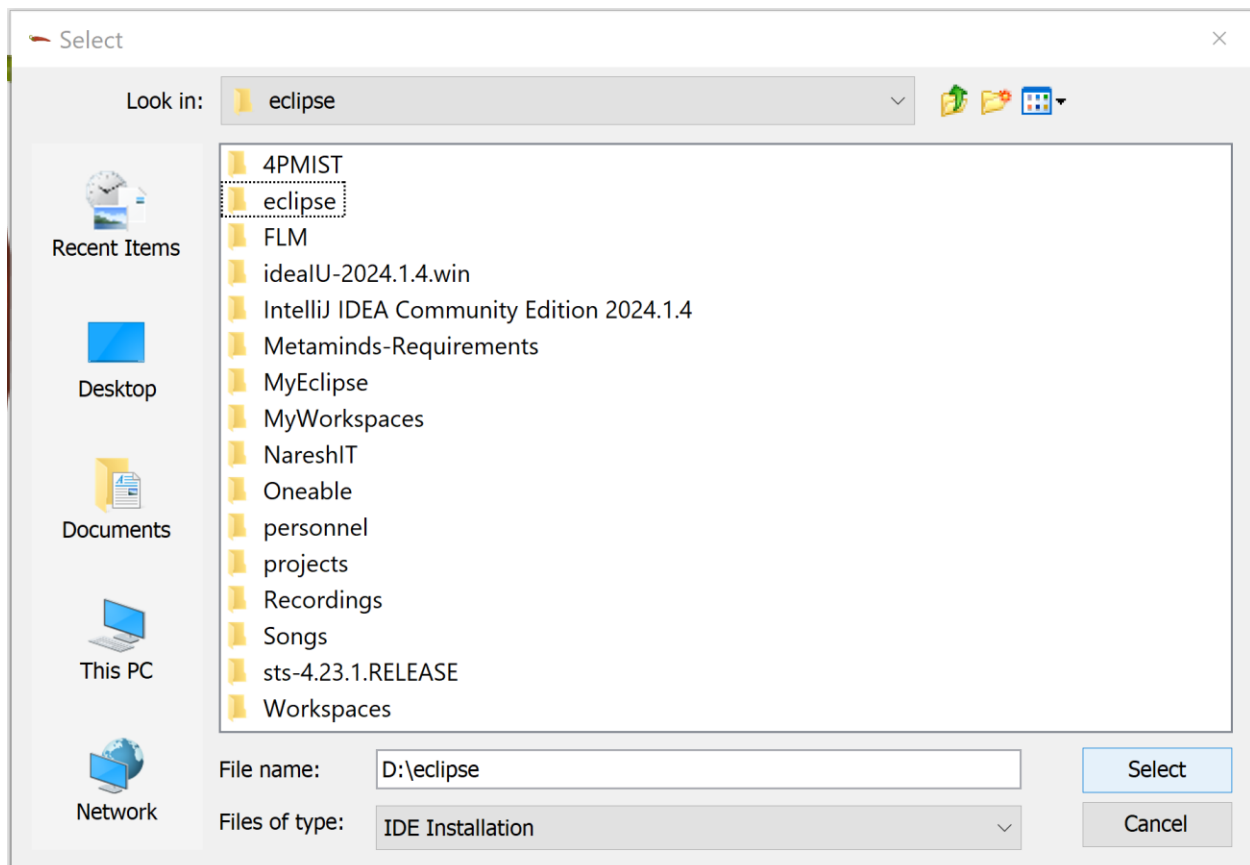

```
C:\Windows\System32\cmd.exe   —   □   ×

Microsoft Windows [Version 10.0.19044.4651]
(c) Microsoft Corporation. All rights reserved.

C:\Users\MAXHUB\.m2\repository\org\projectlombok\lombok\1.18.34>java -jar lombok-1.18.34.jar
```

Specify the location of eclipse by using "Specifiy location" button.

Click on select and click on Install/Update button. Then should copy Lombok.jar file into eclipse folder and the following entry should be copied into eclipse.ini file.

-javaagent:D:\eclipse\lombok.jar

Finally restart the eclipse.
